# TECHNOLOGY SERVING LASTING PERFORMANCE

## PULSE RACER

With its DynaCell sponge version 43<sup>°</sup>, PULSE Racer offers extremely demanding players radical efficiency in every one of their offensive strokes. The Efficient Curve technology combines power and topspin rotation, and provides incredible counter-topspin security.  
2.0/2.2 • Red/Black • Advised Selling Price: €44.90 • Ref: 6131

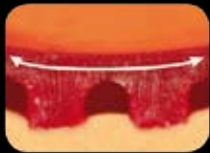

## PULSE RIDER

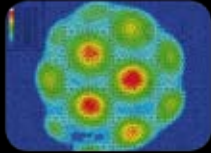

PULSE Rider is for everyone whose ultimate priorities are pleasure, the feeling of ball touch and sound quality. DynaCell sponge version 38<sup>°</sup>, combined with the compact Efficient Curve, will impress topspinners with its incredible performance, especially with mid-way loops.  
2.0/2.2 • Red/Black • Advised Selling Price: €44.90 • Ref: 6132

SPIN-DRIVE technology (innovation developed by Michelin for Cornilleau), presents 3 advantages thanks to the unique shape of its pimples: more spin, greater precision and long lasting grip.

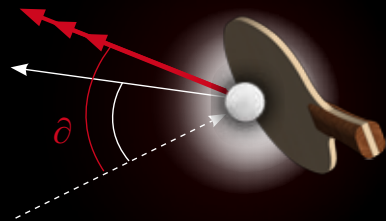

No buckling by Spin-Drive pimple

Spin-Drive pimple  
A more homogeneous contact area:  
• Better contact with the ball  
• Less overpressure

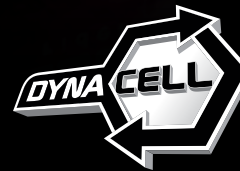

Made of 90% natural rubber, the Efficient Curve top-sheet achieves an unrivalled degree of grip on coverings this fast.

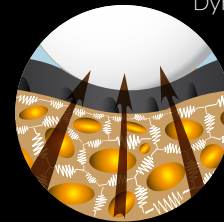

The displacement angle  $\theta$  achieved with the Efficient Curve makes it possible:

- to have more security making first topspin on chops
- to combine power and spin in a topspin smash (even if the bat is very closed).
- to «loop» the ball during mid-distance rallies

With its highly innovative composition (high proportion of natural rubber) combined with very uniform cells (which limit energy loss),

DynaCell sponge reaches the peak in terms of delivering energy and sound.

## LONG LIFE PERFORMANCE

The Efficient Curve, Spin-Drive and DynaCell technologies are all part of our Long Life Performance programme. The combination of Efficient Curve, Spin-Drive and DynaCell technologies guarantees you perfect stability over time and great sustainability of the two main performance criteria: grip and speed. Notice the use of a new gluing process «top sheet/sponge» which puts an end to releases of VOC\* when the product is first unwrapped.
